Career Highlights

- Artificial Intelligence and Data Science undergraduate.
- Built multiple AI, Analytics and Machine Learning projects.
- Strong in Python, SQL, Data Analysis and Predictive Analytics.
- Strong analytical and problem-solving mindset.

Professional Summary

Data Analytics and Artificial Intelligence student with hands-on experience in Data Analysis, Data Visualization, Machine Learning, Predictive Analytics, Business Intelligence and SQL-based data processing. Skilled in Python, SQL, MS Excel, Power BI, Tableau, Pandas, NumPy and statistical analysis. Experienced in transforming raw data into actionable insights through data cleaning, exploratory data analysis (EDA), dashboard development, reporting automation, forecasting and analytical problem solving. Passionate about leveraging data-driven decision making to solve real-world business problems.

Core Expertise

Python • SQL • Power BI • Tableau • Data Analysis • Data Visualization • Machine Learning • Predictive Analytics • Dashboard Development

Technical Skills

Programming Languages: Python, SQL, Java, R (Basic)

Data Analytics: Data Analysis, Data Cleaning, Data Manipulation, Data Interpretation, Data Extraction, EDA, Statistical Analysis, Data Modeling

Visualization: Power BI, Tableau, MS Excel

Machine Learning: Scikit-Learn, Pandas, NumPy, Predictive Analytics, Classification, Regression

Databases: MySQL, PostgreSQL, MongoDB

Tools: Git, GitHub, Google Colab, VS Code

Education

B.Tech – Artificial Intelligence and Data Science

Dr. NGP Institute of Technology

CGPA: 7.62

2023 – 2027

Projects

AI Powered Hall Booking and Event Planning Analytics Platform

- Developed an intelligent event planning platform integrating hall booking, decoration planning, budget optimization and resource allocation.
- Performed customer behavior analysis, booking trend analysis, demand forecasting and revenue analytics using historical booking datasets.
- Utilized Python, SQL and data modeling techniques for data extraction, transformation, cleaning and analytical reporting.
- Designed interactive dashboards and KPI reporting modules to support data-driven decision making and business intelligence workflows.
- Generated actionable insights through predictive analytics, customer segmentation and booking pattern analysis.

Carbon Emission Analytics and Forecasting Platform

- Analyzed large-scale industrial carbon emission datasets to identify trends, anomalies and environmental impact patterns.
- Conducted exploratory data analysis (EDA), data cleaning, feature engineering and statistical analysis using Python and SQL.
- Developed predictive analytics and forecasting models to estimate future emission levels and support sustainability planning.
- Created data visualizations and analytical reports to communicate insights to stakeholders and decision makers.
- Applied data interpretation and business intelligence techniques to support environmental policy evaluation.

Real-Time Data Analytics Pipeline

- Designed and implemented a scalable real-time data ingestion pipeline using Kafka, MongoDB and distributed processing workflows.
- Processed high-volume streaming datasets and transformed raw data into structured formats for analytical applications.
- Built ETL pipelines for data extraction, transformation and loading to improve data accessibility and reporting efficiency.
- Enabled real-time dashboard integration, KPI monitoring and business reporting systems.
- Optimized data processing performance through scalable analytics workflows and asynchronous processing techniques.

Stock Market Analytics and Prediction System

- Collected, cleaned and analyzed historical stock market datasets using Python, SQL, Pandas and NumPy.
- Conducted exploratory data analysis (EDA) to identify trends, volatility patterns and market behavior indicators.
- Built machine learning models for predictive analytics and short-term market forecasting.
- Developed data visualization dashboards to monitor key performance indicators (KPIs), trading signals and market performance.
- Applied statistical analysis and feature engineering techniques to improve model accuracy and forecasting reliability.

Video Authenticity Analysis using Machine Learning

- Performed large-scale data preprocessing, feature extraction and dataset preparation for machine learning workflows.
- Developed classification and anomaly detection models for identifying manipulated and synthetic video content.
- Evaluated model performance using accuracy, precision, recall, F1-score and confusion matrix metrics.
- Automated data processing pipelines to improve analytical efficiency and scalability.
- Applied predictive modeling, computer vision and statistical evaluation techniques for data-driven media analysis.

Certifications

- NPTEL Elite Certification – Score: 87%
- Data Analytics and Machine Learning Learning Programs
- Active participant in technical competitions and coding challenges

Achievements

- Strong foundation in Data Structures and Algorithms.
- Regular problem solver on LeetCode and HackerRank.
- Experience in analytical problem-solving and data-driven thinking.
- Active learner in Data Science, Business Intelligence, and Analytics technologies.

Languages

English, Tamil, Kannada, Japanese
